Current SWANA Activities:

Recycling & Special Waste Technical Division

Bio

Mr. Ralph Bischoff is a Professional Engineer with over 30 years experience in both municipal infrastructure and integrated waste management projects in British Columbia. This includes work in both the public and private sectors.

Currently he acts as Executive Director for the BC "Pacific" Chapter of SWANA

Since 1989, he has focused on integrated waste management projects. He developed the first integrated waste management plans for the City of Burnaby. Examples of components of this were launching of the first "cart" based recycling programs in the Greater Vancouver Regional District for multi family residential settings and development of yard waste diversion programs. He also was involved in the development of the Greater Vancouver Solid Waste Management Plan, steering technical subcommittees.

He is a Principal with Anchor Point Consulting, specializing in niche projects for clients and he also feeds into other consulting firms as a sub consultant specializing in smaller local projects. This arrangement allows greater flexibility in acquiring and allocating project specific resources for clients.

With over 20 years of experience in municipal and regional government settings, Mr. Bischoff brings a flexible collaborative approach in professionalism that manifests itself in attention to working relationship and high quality work standard. He has training and experience in:

- Public Consultation, Group Facilitation, Consensus Building, and Strategic Planning; and
- Conservation Management including Integrated Solid Waste Management as well as Water Resources and Drainage.

His expertise includes:

- Research, Policy, Planning, and Program Implementation;
- Demand Side Management Techniques; and
- Public Communication and Social Marketing.

Some of Mr. Bischoff's key skills:

- data gathering and analysis;
- report preparation and presentation;
- facilitation and Training;
- project management;
- Municipal Infrastructure Management including Stream Protection and Urban Drainage; and
- Integrated Solid Waste Management including; Demand Side Management techniques, Collection protocols, and Waste Reduction and Recycling strategies.
